**Subject:** update on cleanup of unpermitted structure at Wlaker Creek/Tomales Bay oyster leases, some progress  
**Date:** Saturday, March 07, 2015 10:30:11 AM

---

All,

Yesterday 6 March I boated/hiked out to the site of the dike.

Here is a link to a post containing a short video walk of the dike site as well as some stills.

<http://coastodian.org/save-our-tomales-bay-part-18-3-walker-creek-mess-some-progress/>

There is progress, which is promising.

It is also evident that the depth that these oyster-shell-filled bags go into the channel they have been diverting for years is deep, very deep.

The work going forward will be challenging.

I do hope that someone from FGC, CCC, NOAA or whichever is the most appropriate acronym will be sure to monitor this site and ensure that it is brought back as close to what it was before this blight was built.

thanks for your time,

richard
